C.4 BACKGROUND

The Office of Chief Technology Officer (OCTO) has a need for 17 servers to support an explicitly designed architecture for an on premise Enterprise Big Data Lake. A Data Lake is for data storage of a variety of data sources and sizes. The OCTO Enterprise Big Data Lake will store a large volume of data from a variety of sources. The required servers will therefore support the components of the Cloudera Hadoop software distributed on two types of servers: Infrastructure and Data Nodes.

The 17 servers are comprised of two separate environments: Quality Assurance (QA), and Production (Prod). The QA environment will be used for ongoing quality assurance of the system configuration, architecture, and maintenance by administrators. The Production (Prod) environment will be the primary system that users will access.

References used in the design of the system include the Cloudera reference architecture, as well as site-specific design considerations.

C.5 REQUIREMENTS
