A.2 Background

The Disaster Recovery & Continuity of Operations (COOP) Implementation for District's Critical Applications project was created to deploy a redundant and highly available infrastructure to host the failover systems for all the District critical applications, which the primary goal is to include those agencies associated with public safety.

Currently, public safety agencies, as well as District agencies that provide critical services do not have a redundant failover environment. The result of this project is to ensure these agencies are able to seamlessly and quickly failover their systems to an alternate datacenter or deploy their applications in an Active/Active architecture which would result in uninterrupted or minimal impact to critical services. This deficiency results in increased mean time to resolution. Extended service impact and downtime may impact public safety (for example: during the OUC location power outage this year, multiple public safety applications were not accessible). For public safety applications, the plan is to deploy dedicated server virtualization platforms to run critical public safety applications for each agency. The dedicated platforms will be separated logically and physically to comply with local, state or federal security access requirements.
