A.1 SCOPE:

The District of Columbia Government, Office of the Chief Technology Officer, Enterprise Cloud and Infrastructure Services (ECIS), seeks a contractor to provide new Dell Compellent storage disks and disk enclosures to be deployed in the DC2 datacenter. The new storage disks and disk enclosures will be used to facilitate the migration of data and systems to the new merged fabric implemented in OCTO datacenters.

A.2 APPLICABLE DOCUMENTS

The following documents are applicable to this procurement and are hereby incorporated by this reference:

N/A

A.3 DEFINITIONS

These terms when used in this Task Order have the following meanings:

- a) **SAN**- A storage area network (SAN) is a network which provides access to consolidated, block level data storage. SANs are primarily used to enhance storage devices, such as disk arrays, tape libraries, etc. accessible to servers so that the devices appear to the operating system as locally attached devices
- b) **SAN Fabric** – The hardware that connects workstations and servers to storage devices in a SAN is referred to as a "fabric." The SAN fabric enables any-server-to-any-storage device connectivity using Fiber Channel switching technology
- c) **Brocade Switch** - A SAN switch is often a Fiber Channel (FC) switch, which is compatible with the Fiber Channel protocol. The FC switch checks the data packet header, determines the computing devices of origin and destination, and sends the packet to the intended storage system. The OCTO standard SAN Switch is manufactured by Brocade
- d) **Virtual** – nontangible (cannot be touched) equipment that can be in the OCTO Internal Cloud or external cloud environment
- e) **Physical Server** – Equipment (Servers) that can be physically located within a Data Center
- f) **Server** - server is a computer program or a device that provides functionality for other programs or devices, called "clients". This architecture is called the client–server model, and a single overall computation is distributed across multiple processes or devices.

A.4 BACKGROUND

The District of Columbia Government, Office of the Chief Technology Officer, Enterprise Cloud and Infrastructure Services (ECIS), will deploy the new storage disks and disk enclosures in the new merged storage array network (SAN) Fabric at DC2. The new merged

SAN Fabric architecture will have increased capacity, reliability and availability.

The current environment legacy SAN Fabric has end of life switches which need to be decommissioned, the architecture is not highly available or redundant and limits OCTO's ability to easily migrate workloads and data between storage arrays and SAN attached systems. With the new design, ECIS will be able to easily transition workloads from a failed storage device to any other storage device, thereby reducing the overall impact and increasing system availability. Also, prior to any maintenance to the storage array network, critical data and workloads can be migrated to another system as proactive maintenance activity to avoid potential downtime or system impact. The new storage disks and disk enclosures once installed will also allow OCTO to be able to provision disk storage from any storage array to any SAN attached system in the datacenter.
